Hiring Manager

Moniepoint Group

Lagos, Nigeria

Dear Hiring Manager,

I am excited to apply for the Back End Developer position at Moniepoint. With over five years of experience building scalable software solutions in Java and Spring Boot, I am eager to contribute my technical expertise and problem-solving skills to a company that is redefining financial services across Africa.

In my current role as a Software Engineer, I have designed and deployed microservices using Java, Spring Boot, Docker, and Kubernetes, while ensuring high performance, security, and scalability. I have also integrated third-party APIs, optimized database interactions using PostgreSQL and Hibernate, and applied test-driven development practices to maintain clean and efficient code. These experiences have sharpened my ability to troubleshoot, debug, and deliver robust solutions that align with business goals.

What excites me most about Moniepoint is your commitment to innovation, teamwork, and customer success. I am particularly drawn to the opportunity to work on large-scale distributed systems that process billions in transactions, and to contribute to solutions that empower individuals and businesses in emerging markets. I believe my background in back-end engineering, coupled with strong communication and collaboration skills, makes me a great fit for your engineering team.

I would welcome the opportunity to discuss how my skills and passion for impactful technology can contribute to Moniepoint's continued growth and innovation. Thank you for considering my application.

Sincerely,

Olabowale Babatunde Ipaye
